Claude for Financial Services

Reference agents, skills, and data connectors for the financial-services workflows we see most — investment banking, equity research, private equity, and wealth management.

Everything here is available **two ways from one source**: install it as a Claude Cowork plugin, or deploy it through the Claude Managed Agents API behind your own workflow engine. Same system prompt, same skills — you choose where it runs.

> **Important**
>
> Nothing in this repository constitutes investment, legal, tax, or accounting advice. These agents draft analyst work product — models, memos, research notes, reconciliations — for review by a qualified professional. They do not make investment recommendations, execute

> transactions, bind risk, post to a ledger, or approve onboarding; every output is staged for human sign-off. You are responsible for verifying outputs and for compliance with the laws and regulations that apply to your firm.

What's in the repo:

- Agents — named, end-to-end workflow agents (Pitch Agent, Market Researcher, GL Reconciler, ...). Each ships as a Cowork plugin **and** as a Claude Managed Agent template you deploy via `/v1/agents`.
- Vertical plugins — the underlying skills, slash commands, and data connectors, bundled by FSI vertical. Install these on their own if you just want `/comps`, `/dcf`, `/earnings` and the connectors without a full agent.

Agents

Each agent is named for the workflow it runs. They're starting points: install the ones that match your work, then tune the prompts, skills, and connectors to how your firm does it.

Each agent plugin is **self-contained** — it bundles the skills it uses, so installing the agent is all you need.

Function	Agent	What it does
Coverage & advisory	Pitch Agent	Comps, precedents, LBO → branded pitch deck, end to end
	Meeting Prep Agent	Briefing pack before every client meeting
Research & modeling	Market Researcher	Sector or theme → industry overview, competitive landscape, peer comps, ideas shortlist
	Earnings Reviewer	Earnings call + filings → model update → note draft
	Model Builder	DCF, LBO, 3-statement, comps — live in Excel
Fund admin & finance ops	Valuation Reviewer	Ingests GP packages, runs valuation template, stages LP reporting
	GL Reconciler	Finds breaks, traces root cause, routes for sign-off
	Month-End Closer	Accruals, roll-forwards, variance commentary
	Statement Auditor	Audits LP statements before distribution
Operations & onboarding	KYC Screener	Parses onboarding docs, runs the rules engine, flags gaps

For Managed Agent deployment — `agent.yaml`, leaf-worker subagents, steering-event examples, and per-agent security notes — see managed-agent-cookbooks/.

Repository Layout

```
plugins/
  agent-plugins/              # Named agents — one self-contained plugin each
  vertical-plugins/           # Skill + command bundles by FSI vertical, plus MCP connectors
  partner-built/              # Partner-authored plugins (LSEG, S&P Global)
managed-agent-cookbooks/      # Claude Managed Agent cookbooks — one dir per agent
claude-for-msft-365-install/  # Admin tooling to provision the Claude Microsoft 365 add-in
scripts/                      # deploy-managed-agent.sh · check.py · validate.py · orchestrate.py · sync-agent-skills.py
```

Getting Started

Cowork

In Cowork, open **Settings** → **Plugins** → **Add plugin** and either:

- **Paste this repo URL** — `https://github.com/anthropics/financial-services` — then pick the agents and verticals you want from the marketplace list, or
- **Upload a zip** — zip any directory under `plugins/` (e.g. `plugins/agent-plugins/pitch-agent/`) and drop it in.

Claude Code

```
# Add the marketplace
claude plugin marketplace add anthropics/financial-services

# Core skills + connectors (install first)
claude plugin install financial-analysis@claude-for-financial-services

# Named agents — pick the ones you want
claude plugin install pitch-agent@claude-for-financial-services
claude plugin install gl-reconciler@claude-for-financial-services
claude plugin install market-researcher@claude-for-financial-services

# Vertical skill bundles
claude plugin install investment-banking@claude-for-financial-services
claude plugin install equity-research@claude-for-financial-services
```

Once installed, agents appear in Cowork dispatch, skills fire automatically when relevant, and slash commands are available in your session (`/comps` , `/dcf` , `/earnings` , `/ic-memo` , …).

Claude Managed Agents

README Apache-2.0 license

Each template under managed-agent-cookbooks/ references the same system prompt and skills as its plugin counterpart. The deploy script resolves file references, uploads skills, creates leaf-worker subagents, and POSTs the orchestrator to `/v1/agents` . See scripts/orchestrate.py for a reference event loop that routes `handoff_request` events between agents via your own orchestration layer.

> **Research Preview:** subagent delegation (`callable_agents`) is a preview capability. See per-agent READMEs for security and handoff guidance.

How It Fits Together

	What it is	Where it lives
Agents	Self-contained plugins that own a workflow end to end — system prompt plus the skills it uses. Cowork and the Managed Agent wrapper both reference the same directory.	`plugins/agent-plugins/<slug>/`
Skills	Domain expertise, conventions, and step-by-step methods Claude draws on automatically when relevant. Authored once in the verticals; each agent bundles a synced copy of the ones it needs.	`plugins/vertical-plugins/<vertical>/skills/` (source) · `plugins/agent-plugins/<slug>/skills/` (bundled)
Commands	Slash actions you trigger explicitly (`/comps` , `/earnings` , `/ic-memo`).	`plugins/vertical-plugins/<vertical>/commands/`
Connectors	MCP servers that wire Claude to your data — terminals, research platforms, document stores.	`plugins/vertical-plugins/financial-analysis/.mcp.json`
Managed-agent wrappers	`agent.yaml` + depth-1 subagents + steering examples for headless deployment.	`managed-agent-cookbooks/<slug>/`

Everything is file-based — markdown and JSON, no build step.

Vertical Plugins

Start with **financial-analysis** — it carries the shared modeling skills and all data connectors. Add verticals for the workflows you need.

Plugin	What it adds
financial-analysis *(core)*	Comps, DCF, LBO, 3-statement, deck QC, Excel audit. All 11 data connectors.
investment-banking	CIMs, teasers, process letters, buyer lists, merger models, deal tracking.
equity-research	Earnings notes, initiations, model updates, thesis and catalyst tracking.
private-equity	Sourcing, screening, diligence checklists, IC memos, portfolio monitoring.
fund-admin	GL recon, break tracing, accruals, roll-forwards, variance commentary, NAV tie-out.
operations	KYC document parsing and rules-grid evaluation.
claude-for-financial-advisors	Advisor workflows: meeting prep and follow-up, compliance pre-check, prospect intake, rebalance review, alts and estate briefs, on live data from the advisor's CRM, portfolio, planning, and estate platforms.
lseg *(partner)*	Bond RV, swap curves, FX carry, options vol, macro-rates monitoring on LSEG data.
sp-global *(partner)*	Tear sheets, earnings previews, funding digests on S&P Capital IQ.

MCP Integrations

All connectors are centralized in the **financial-analysis** core plugin and shared across the rest.

Claude for Microsoft 365 — Install Tooling

If your firm runs Claude inside Excel, PowerPoint, Word, and Outlook via the Microsoft 365 add-in, `claude-for-msft-365-install/` is the admin tooling to provision it against **your own cloud** — Vertex AI, Bedrock, or an internal LLM gateway — instead of Anthropic's API.

It's a Claude Code plugin (not a Cowork plugin) that walks an IT admin through generating the customized add-in manifest, granting Azure admin consent, and writing per-user routing config via Microsoft Graph. Install with:

```
claude plugin install claude-for-msft-365-install@claude-for-financial-services
/claude-for-msft-365-install:setup
```

This is separate from the agents and vertical plugins above — it's the on-ramp that gets the add-in deployed in a tenant, after which the agent and skills here are what runs inside it.

Making It Yours

These are reference templates — they get better when you tune them to how your firm works.

- **Swap connectors** — point `.mcp.json` at your data providers and internal systems.
- **Add firm context** — drop your terminology, processes, and formatting standards into skill files.
- **Bring your templates** — `/ppt-template` teaches Claude your branded PowerPoint layouts.
- **Adjust agent scope** — edit `agents/<slug>.md` to match how your team actually runs the workflow.
- **Add your own** — copy the structure for workflows we haven't covered.

Skill & Command Reference

▶ **financial-analysis** — core modeling, Excel, deck QC

▶ **investment-banking** — deal materials and execution

▶ **equity-research** — coverage and publishing

▶ **private-equity** — sourcing through portfolio ops

Contributing

Everything here is markdown and YAML. Fork, edit, PR. For new content:

- New skill → add it under `plugins/vertical-plugins/<vertical>/skills/`, then run `python3 scripts/sync-agent-skills.py` to propagate to any agent that bundles it.
- New agent → `plugins/agent-plugins/<slug>/` (with `agents/<slug>.md` + `skills/`) and a matching `managed-agent-cookbooks/<slug>/`.
- Run `python3 scripts/check.py` before pushing — it lints every manifest, verifies all cross-file references resolve, and fails if any bundled skill has drifted from its vertical source.
